These additions help *Adapted Physical Education and Sport* maintain its reputation as a comprehensive, user-friendly text that helps teachers provide top-quality services to people with unique physical education needs. Greatly influenced by the Individuals with Disabilities Education Act, this book helps in identifying the unique needs of students and developing physical education programs, including individualized education programs (IEPs) for students with disabilities, that are consistent with current federal legislation. **STRONG ANCILLARIES** The text is augmented by its ancillaries, which include an instructor guide, test package, presentation package, and web resource with video. The instructor guide offers chapter objectives, additional resources, and learning and enrichment activities that will help students master the content and extend their knowledge. The text will help deepen understanding of the implications of disabilities for people through age 21 (though much of the book is relevant in the entire life span). It grounds readers in the foundational topics for adapted physical education and sport, explores the developmental considerations involved, and outlines activities for developing programs for people with unique physical education needs. **Principles and Applications of Assessment in Counseling** Routledge

The Handbook of Infant, Toddler, and Preschool Mental Health Assessment brings together, for the first time, leading clinical researchers to provide empirically based recommendations for assessment of social-emotional and behavior problems and disorders in the earliest years. Each author presents state-of-the-art information on scientifically valid, developmentally based clinical assessments and makes recommendations based on the integration of developmental theory, empirical findings, and clinical experience. Though the field of mental health assessment in infants and young children lags behind work with older children and adults, recent scientific advances, including new measures and diagnostic approaches, have led to dramatic growth in the field. The editors of this exciting new work have assembled an extraordinary collection of chapters that thoroughly discuss the conceptualizations of dysfunction in infants and young children, current and new diagnostic criteria, and such specific disorders as sensory modulation dysfunction, sleep disorders, eating and feeding disorders, autistic spectrum disorders, anxiety disorders, posttraumatic stress disorder, and ADHD. Chapters further highlight the importance of incorporating contextual factors such as parent-child relationship functioning and cultural background into the assessment process to increase the validity of findings. Given the comprehensiveness of this groundbreaking volume in reviewing conceptual, methodological, and research advances on early identification, diagnosis, and clinical assessment of disorders in this young age group, it will be an ideal resource for teachers, researchers, and a wide variety of clinicians including child psychologists, child psychiatrists, early intervention providers, early special educators, social workers, family physicians, and pediatricians.
