The Mass Ornament today remains a refreshing tribute to popular culture, and its impressively interdisciplinary writings continue to shed light not only on Kracauer's later work but also on the ideas of the Frankfurt School, the genealogy of film theory and cultural studies, Weimar cultural politics, and, not least, the exigencies of intellectual exile.

Innovative Thermal and Nonthermal Processing, Bioaccessibility and Bioavailability of Nutrients and Bioactive Compounds presents the implications of conventional and innovative processing on the nutritional and health aspects of food products. Chapters cover the relationship between gastronomic science,

nutrition and food science in the development of healthy products, introduce the most commonly used conventional and innovative approaches to preserve foods and extract valuable compounds, describe how processing affects bioavailability and bioaccessibility of lipids, particularly fatty acids, protein, amino acids and carbohydrates, and discuss how processing affects bioavailability and bioaccessibility of minerals, water-soluble vitamins, and fat soluble vitamins. Final sections cover processing, bioavailability and bioaccessibility of bioactive compounds, describing how processing (conventional and non-conventional) is affecting to bioavailability and bioaccessibility of bioactive sulphur compounds, polyphenols, flavonoids, and bioactive peptides. World Cancer Report: Cancer Research for Cancer Prevention is a multidisciplinary publication, with leading international scientists as authors and reviewers. More than 60 different chapters describe multiple aspects of cancer prevention and the research that underpins prevention, focusing on research activity during the past 5 years. Starting with the latest trends in cancer incidence and mortality worldwide, this publication provides wide-ranging insights into cancer prevention based on the known causes of cancer, factors that determine how cancer develops, and the behaviour of different tumour types, and presents a broad scope of interventions to reduce the cancer burden from a global perspective, including addressing inequalities that affect cancer prevention.

**Handbuch der nordsemitischen Epigraphik** Рипол Классик Hiermit liegt das erste umfassende Kompendium aller bekannten Heilmittel und Heilverfahren der Hethiter vor. Als

Quellengrundlage dienen Ritualbeschreibungen und Rezepturenansammlungen aus dem 15. bis 13. Jh. v. Chr., die aus den Archiven der hethitischen Hauptstadt Hattuscha erhalten sind. Bei den Ritualen, mit denen meist über mehrere Tage hin Befindensstörungen von Patienten behandelt wurden, fällt der psychotherapeutische Effekt ins Auge, was ihrer Heilungsmagie einen höheren Stellenwert verleiht als bisher angenommen. Die Rezepturen lassen eine enge Vermischung von magischen Praktiken und pharmakologischem Wissen erkennen. Ein Referenzwerk zur Geschichte der altorientalischen Heilkunde, Magie und Pharmakologie.

This series publishes original contributions which describe and theoretically analyze structures of natural languages. The main focus is on principles and rules of grammatical and lexical knowledge both with respect to individual languages and from a comparative perspective. The volumes cover all levels of linguistic analysis, especially phonology, morphology, syntax, semantics, and pragmatics, including aspects of language acquisition, language use, language change, and phonetical and neuronal realization.

Sometime in the 18th century, the word equality gained ground as a political ideal, but the idea was always vague. In this treatise, Erik von Kuehnelt-Leddihn argues that it reduced to one simple and very dangerous idea: equality of political power as embodied in democracy. He marshals the strongest possible case that democratic equality is the very basis not of liberty, as is commonly believed, but the total state. He uses national socialism as his prime example. He further argues the old notion of government by law is upheld in old monarchies, restrained by a noble elite. Aristocracy, not democracy, gave us liberty. On his side in this argument, he includes the whole of the old liberal tradition, and offers overwhelming evidence for his case. In our times, war and totalitarianism do indeed sail under the democratic flag. This book, capable of overturning most of what you thought you knew about political systems, was first published in 1952.

The series Topics in Current Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized in topical volumes. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field.
