In this accessible, brilliantly argued book, leading political economist Ann Pettifor explains in straightforward terms history's most misunderstood invention: the money system. Pettifor argues that democracies can, and indeed must, reclaim control over money production and restrain the out-of-control finance sector so that it serves the interests of society, as well as the needs of the ecosystem. The Production of Money examines and assesses popular alternative

debates on, and innovations in, money, such as “green QE” and “helicopter money.” She sets out the possibility of linking the money in our pockets (or on our smartphones) to the improvements we want to see in the world around us.

Described by the author as "a slightly autobiographical and heavily biased book about investing", Simple But Not Easy won fans among both professional and private investors alike when first released in 2007. The theme of the book is that investment is simpler than non-professionals think it is, in that the rudiments can be expressed in ordinary English and picked up by anybody. It is not a science. But investment is also difficult. People on the outside tend to think that anyone on the inside should be able to do better than the market indices. This is not so. Picking the managers who are likely to do better is a challenge. Richard Oldfield begins with a detailed confession of some of his worst mistakes and what they have taught him. He discusses the different types of investment, why fees matter, and the importance of measuring performance properly. He also outlines what to look for (and what not to look for) in an investment manager, when to fire a manager, and how to be a

successful client. A cult classic for its candid confessions and sparkling wit, this extended edition of Simple But Not Easy – featuring a new author's preface and a substantial afterword – remains an indispensable companion for all those interested in the rewarding but enigmatic pursuit of investing.

Fund Money Mania is a sweeping account of financial speculation and its consequences, from ancient Rome to the Meltdown of 2008. Acclaimed journalist and investor Bob Swarup tracks the history of speculative fevers caused by the appearance of new profitable investment opportunities; the new assets created and the increasing self-congratulatory euphoria that drives them to unsustainable highs, all fed by an illusion of insight and newly minted experts; the unexpected catalysts that eventually lead to panic; the inevitable crash as investors scramble to withdraw their funds from the original market and any other that might resemble it; and finally, the brevity of financial memory that allows us to repeat the cycle without ever critically evaluating the drivers of this endless cycle. In short, it is the story of what makes us human.

Confused by the Odds will change the way you think about financial assets, the risks of the next global nuclear war, racial bias in policing, the role of genetics in intelligence, and medical tests. You will learn how to ignore flawed assumptions about the normal distribution of returns from investing in stocks and bitcoin. You will come away with a better understanding of the "Long Peace"—the last three-quarters of a century without a global war—and how it does not

necessary bode well for the future. You'll learn that randomized control experiments, the basis for much of science today, are not the gold standard of proof that most believe them to be and why they are part of the reason for the replicability crisis in science today. You'll see how the US Navy searches for lost submarines and spam filters identify junk mail. You'll understand how Democrats and Republicans come to dramatically different conclusions about everything from the outcome of the 2020 election to COVID-19. Confused by the Odds will give you the knowledge and tools to avoid being misled by probability. Many books have been published on probability laden with dense formula and proofs. This is not one of them. David Lockwood, a former member of the faculty of the Graduate School of Business at Stanford University, presents intuitive explanations of the application of probability to practical, everyday problems—without all the equations. Through real-world examples, this book shows us how to never again be confused by the odds.

This book is a simple and concise text on the subject of security analysis and portfolio management. It is targeted towards those who do not have prior background in finance, and hence the text veers away from rather complicated formulations and discussions. The course 'Security Analysis and Portfolio Management' is usually taught as an elective for students specialising in financial management, and the authors have an experience of teaching this course for more than two decades. The book contains real empirical evidence and examples in terms of returns, risk and price multiples from the Indian equity markets (over the past two decades) that are a result of the analysis undertaken by the authors themselves. This empirical evidence and analysis help the reader in understanding basic concepts through real data of the Indian stock market. To drive home concepts, each chapter has many illustrations and case-lets citing real-life examples and sections

called 'points to ponder' to encourage independent thinking and critical examination. For practice, each chapter has many numericals, questions, and assignments

The Housing Bubble was hardly the first in human history. What's eluded historians is the same issue that eludes commentators today: the underlying cause of bubbles. This book is the first (and only) book to solve the mystery of the most famous bubble in world history: Tulipmania in 17th century Netherlands. It is a legendary event but explanations have been lacking. People blame irrational exuberance, free markets, and an unleashed aristocracy. Douglas French takes a different route: he follows the money to prove that the bubble resulted from a government intervention that dramatically exploded the money supply and fueled the tulip-price bubble - not altogether different from modern bubbles. This book was French's Master's thesis written under the direction of Murray Rothbard and examining three of the most famous speculative bubble episodes in history through the lens of Austrian Business Cycle Theory. Although each of

these episodes is well documented, this book examines the monetary interventions that engendered each of these events showing that not only the Mississippi Bubble and the South Sea Bubble were caused by government meddling, but Tulipmania was as well. Tulipmania was unique in that it was the sound money policy of the Dutch combined with free coinage laws that led to an acute increase in the supply of money and fostered an atmosphere that was ripe for speculation and malinvestment, manifesting itself in the intense trading of tulip bulbs. The author examines not only the Mississippi Bubble but also the life and monetary theories of its architect, John Law. Professor Joe Salerno calls Law the world's first macroeconomist who implemented a Keynesian monetary system in France nearly two hundred years before Keynes was born. At the same time across the English Channel, a nearly bankrupt British government looked on with envy at Law's system, believing that he was working a financial miracle. It was anything

but this and investors in both countries were devastated. Although these episodes occurred centuries ago, readers will find the events eerily similar to today's bubbles and busts: low interest rates, easy credit terms, widespread public participation, bankrupt governments, price inflation, frantic attempts by government to keep the booms going, and government bailouts of companies after the crash. When will we learn? We first have to get cause and effect in history straight. This book is an excellent contribution to that effort.
