*School-Age Students* is your working manual for helping children with language learning disabilities (LLD) gain the tools they need to succeed in school. Going beyond the common approach to language disorders in school-age populations, this innovative resource supplements a theoretical understanding of language intervention with a wealth of practical application strategies you can use to improve learning outcomes for children and adolescents

with LLD. Well-referenced discussions with real-life examples promote evidence-based practice. Case histories and treatment strategies help you better understand student challenges and develop reliable methods to help them achieve their learning goals. Unique application-based focus combines the conceptual and practical frameworks to better help students achieve academic success. Questions in each chapter encourage critical analysis of intervention methods for

a deeper understanding of the beliefs behind them. In-depth coverage of controversial topics challenges your understanding and debunks common myths. Realistic examples and case studies help you bridge theory to practice and apply intervention principles. Margin notes highlight important facts, questions, and vocabulary for quick reference. Key Questions in each chapter put concepts into an appropriate context and help you focus on essential content.

Summary Statement and Introductory Thoughts sections provide succinct overviews of chapter content for quick familiarization with complex topics. Hide-a-Saurus "O'Reilly Media, Inc." Though it may come as a surprise to both cinema lovers and industry professionals who believe that 3-D film was born in the early 1950s, stereoscopic cinema actually began in 1838, more than 100 years before the 3-D boom in Hollywood was created by

the release of Arch Oboler's African adventure film, *Bwana Devil*, filmed in "Natural Vision" 3-D. *Stereoscopic Cinema and the Origins of 3-D Film, 1838--1952*, is a comprehensive prehistory of the stereoscopic motion picture. In the late nineteenth century, stereoview cards were popular worldwide, and soon filmmakers wanted to capture these "living pictures" with motion, sound, and color. Writing a new chapter in the history of early cinema, Ray Zone not only

discusses technological innovation and its cultural context but also examines the aesthetic aspects of stereoscopic cinema in its first century of production.

This remarkably clearly written and timely critical evaluation of core issues in the study and application of interactive digital narrative (IDN) untangles the range of

theories and arguments that have developed around IDN over the past three decades. Looking back over the past 30 years of theorizing around interactivity, storytelling, and the digital across the fields of game design/game studies, media studies, and narratology, as well as interactive documentary and other emerging forms, this text offers important and insightful correctives to common misunderstandings that pervade the field. This book also changes the

perspective on IDN by introducing a comprehensive conceptual framework influenced by cybernetics and cognitive narratology, addressing limitations of perspectives originally developed for legacy media forms. Applying its framework, the book analyzes successful works and lays out concrete design advice, providing instructors, students, and practitioners with a more precise and specific understanding of IDN. This will be essential reading for courses in interactive

narrative, interactive storytelling, and game writing, as well as digital media more generally. *Let Me Hear Your Voice* Hachette UK

Six-year-old Shu Shu is unable to contain her

excitement about her happy secret—to find daisies for her mother. She tells her sister her secret plan, and then sets out on her adventure, determined not to tell anyone else. Surrounded by nature's rhythmic symphony, she grows frustrated by the animals she meets along the way because they refuse to let her pick their daisies. When she approaches the smart-alecky goat who guards the most beautiful daisies of all, she attempts to outsmart him with a gift of kindness.

Readers of this picture book for children will share in Shu Shu's delight as she discovers how wonderful it feels to do something nice for someone—even when doing so is more difficult than she ever imagined. The repetition of sounds and comical animal characters add flavor to this simple, yet thoughtful, story.  
Semiotics and Title Sequences Univ. Press of Mississippi  
This series of wordless picture books aims to help children with speech,

language and communication needs (SLCN) to develop their expressive sentence and narrative skills, through learning to tell each story. There are 10 stories that will be separated into two levels, geared towards advancing the child from simple to intermediate and complex sentences. The stories are written in the style of a film scroll and contain familiar events to ensure the story is understandable. The general formula of each story will be a disruption (often humorous) in

familiar routines followed by resolutions. The accompanying guide will have strategies on how to teach and progress the child through each level and stage, and will have an additional skills section. Although this resource is primarily for SLCN, they could also be used for early years and reception.
