Autotheory--the commingling of theory and philosophy with autobiography--as a mode of critical artistic practice indebted to feminist writing and activism. In the 2010s, the term "autotheory" began to trend in literary spheres, where it was used to describe books in which memoir and autobiography fused with theory and philosophy. In this book, Lauren Fournier extends the meaning of the term, applying it to other disciplines and practices. Fournier provides a long-awaited account of autotheory, situating it as a mode of contemporary, post-1960s artistic practice that is indebted to feminist writing, art, and activism. Investigating a series of works by writers and artists including Chris Kraus and Adrian Piper, she considers the politics, aesthetics, and ethics of autotheory.

An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives. "Written by three experts in the field, Deep Learning is the only comprehensive book on the subject." —Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. John Steinbeck is a towering figure in twentieth-century American literature; yet he remains one of our least understood writers. This major reevaluation of Steinbeck by Gavin Jones uncovers a timely thinker who confronted the fate of humanity as a species facing climate change, environmental crisis, and a growing divide between the powerful and the marginalized. Driven by insatiable curiosity, Steinbeck's work crossed a variety of borders – between the United States and the Global South, between human and nonhuman lifeforms, between science and the arts, and between literature and film – to explore the transformations in consciousness necessary for our survival on a precarious planet. Always seeking new forms to express his ecological and social vision of human interconnectedness and vulnerability, Steinbeck is a writer of urgent concern for the twenty-first century, even as he was haunted by the legacies of racism and injustice in the American West.

This book was first published in 1999. This collection of essays by leading scholars from Britain, the USA and Canada opens up the limited landscape of Victorian novels by focusing attention on some of the women writers popular in their own time but forgotten or neglected by literary history. Spanning the entire Victorian period, this study investigates particularly the role and treatment of 'the woman question' in the second half of the century. There are discussions of marriage, patriarchy and divorce, satire, suffragette writing, writing for children, and links between literature and art. Moving from Margaret Oliphant and Charlotte Mary Yonge to Mary Ward, Marie Corelli, 'Ouida' and E. Nesbit, this book illuminates the complex cultural and literary roles, and the engaging contributions, of Victorian women writers.
