If You Can't Wholesale After This is a step by step guide to closing your first real estate deal without needing any of your own money or credit. It's the first book in the "I've Got Nothing For You.." series. This series of books aims to guide you through the process of becoming financially free through real estate investing. If You Can't Wholesale After This was written for people who are fed up with the traditional "rat race" style of living and want to create a new way of living no matter if you have ever been involved in real estate or have any money of your own. This book will guide your mind and actions to building massive wealth step by step. Todd himself completed his first deal with only \$11 in his checking account. He believes that anyone can build financial

freedom by changing their mindsets and improving their daily habits. This book will change the way that you think about money and the way you think about the opportunity surrounding you each and every day. This book will inspire you to begin your own real estate business and provide a living for your family that you only dreamed of previously.

Case-Based Reasoning Down the Shore Publishing

• New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world "At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope." —Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming* "There's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom." —David Roberts, *Vox* "This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook." —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are

currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

The World Is Flat [Further Updated and Expanded; Release 3.0] "O'Reilly Media, Inc."

In a moving intervention into Romantic-era depictions of the dead and wounded, Philip Shaw's timely study directs our gaze to the neglected figure of the common soldier. How suffering and sentiment were portrayed in a variety of visual and verbal media is Shaw's particular concern, as he examines a wide range of print and visual media, from paintings to sketches to political prose and anti-war poetry, and from writings on culture and aesthetics to graphic satires and early photographs. Whilst classical portraiture and history painting certainly conspired with official ideologies to deflect attention from the true costs of war, other works of art, literary as well as visual, proffered representations that countered the view that suffering on and off the battlefield is noble or heroic. Shaw uncovers a history of changing attitudes towards suffering, from mid-eighteenth century ambivalence to late eighteenth- and early nineteenth-century concepts of moral sentiment. Thus, Shaw's story is one of how images of death and wounding facilitated and queried these shifts in the perception of war, qualifying as well as consolidating ideas of individual and national unanimity. Informed by readings of the letters and journals of serving soldiers, surgeons' notebooks and sketches, and the writings of peace and war agitators, Shaw's study shows how an attention to the depiction of suffering and the development of 'liberal' sentiment enables a reconfiguring of historical and theoretical notions of the body as a site of pain and as a locus of violent national imaginings.

Creativity is one of the least understood aspects of intelligence and is often seen as 'intuitive' and not susceptible to rational enquiry. Recently, however, there has been a resurgence of interest in the area, principally in artificial intelligence and cognitive science, but also in psychology, philosophy, computer science, logic, mathematics, sociology, and architecture

and design. This volume brings this work together and provides an overview of this rapidly developing field. It addresses a range of issues. Can computers be creative? Can they help us to understand human creativity? How can artificial intelligence (AI) enhance human creativity? How, in particular, can it contribute to the 'sciences of the artificial', such as design? Does the new wave of AI (connectionism, geneticism and artificial life) offer more promise in these areas than classical, symbol-handling AI? What would the implications be for AI and cognitive science if computers could not be creative? These issues are explored in five interrelated parts, each of which is introduced and explained by a leading figure in the field. - Prologue (Margaret Boden) - Part I: Foundational Issues (Terry Dartnall) - Part II: Creativity and Cognition (Graeme S. Halford and Robert Levinson) - Part III: Creativity and Connectionism (Chris Thornton) - Part IV: Creativity and Design (John Gero) - Part V: Human Creativity Enhancement (Ernest Edmonds) - Epilogue (Douglas Hofstadter) For researchers in AI, cognitive science, computer science, philosophy, psychology, mathematics, logic, sociology, and architecture and design; and anyone interested in the rapidly growing field of artificial intelligence and creativity.

The first history of childhood in Tudor England What was it like to grow up in England under the Tudors? How were children cared for, what did they play with, and what dangers did they face? In this beautifully illustrated and characteristically lively account, leading historian Nicholas Orme provides a rich survey of childhood in the period. Beginning with birth and infancy, he explores all aspects of children's experiences, including the games they played, such as Blind Man's Bluff and Mumble-the-Peg, and the songs they sang, such as "Three Blind Mice" and "Jack Boy, Ho Boy." He shows how social status determined everything from the food children ate and the clothes they wore to the education they received and the work they undertook. Although childhood and adolescence could be challenging and even hazardous, it was also, as Nicholas Orme shows, a treasured time of learning and development. By looking at the lives of Tudor children we can gain a richer understanding of the era as a whole.
