The Third Edition of Handbook of Evidence-Based Radiation Oncology updates and revises the previous successful editions and serves as a key reference for radiation oncology professionals. Organized by body site, concise clinical chapters provide easy access to critical information. Important "pearls" of epidemiology, anatomy, pathology, and clinical presentation are highlighted. The key elements of the work-up are listed, followed by staging and/or risk classification systems.

Treatment recommendations are discussed based on stage, histology, and/or risk classification. Brief summaries of key trials and studies provide the rationale for the recommendations. Practical guidelines for radiation techniques are described and complications and follow-up guidelines are outlined. The Third Edition incorporates new key studies and trials to reflect current radiation oncology practice; includes the most recent staging systems; and features new color illustrations and anatomic atlases to aid in treatment planning. This book is a valuable resource for students, resident physicians, fellows, and other practitioners of radiation oncology.

A comprehensive e-guide to dinosaurs and prehistoric animals and the world they inhabited millions of years ago. Includes more than 700 full-color illustrations, this definitive e-guide paints a vivid portrait of extraordinary dinosaurs and prehistoric animals, and the ecosystems they lived in millions of years ago. This e-guide features authoritative text, crystal-clear illustrations, and a straightforward approach to revealing the fascinating lives and habitats of dinosaurs, pterosaurs, marine reptiles, and prehistoric beasts. The introductory section explains classification systems, geological timelines, the evolution of the dinosaurs, and how fossils form and are discovered by paleontologists. For ease of reference, the main body of the ebook is divided into three sections: the Precambrian and Paleozoic eras, when animals first began evolving; the Mesozoic era, which saw the flourishing and eventual extinction of the dinosaurs; and the Cenozoic era, when giant mammals walked the Earth. Each section is broken down into its geological time periods, and, within these, the species are organized according to habitat--whether they lived on land, in the water, or in the air. There are detailed profiles

of 200 dinosaurs and other ancestors of modern animals. Each entry combines a precise, jargon-free description with full-color illustrations, skeletons, and replica models, annotated to showcase the unique features of the species. Maps show where each animal's fossils have been found, and many profiles are supported by photographs to show actual excavation sites.

Provides coverage of the pathogenesis, clinical, morphologic, molecular and investigational aspects of a full range of blood disorders seen in daily practice. The revised fifth edition of this renowned atlas presents readers with a comprehensive, visual guide to clinical hematology, featuring 2700 full-color photographs and figures depicting the spectrum of hematological diseases. Ranging from photographs of the clinical manifestations and key microscopic findings to diagrams of the molecular aspects of these diseases, the book provides up-to-date information of the blood diseases that clinicians encounter every day. **Color Atlas of Clinical Hematology: Molecular and Cellular Basis of Disease** offers the reader an understanding of normal cell machinery, and of the molecular basis for such processes as DNA and cell replication, RNA species, trafficking and splicing, protein synthesis, transcription factors, growth factor signal transduction, epigenetics, cell differentiation, autophagy, and apoptosis. The text goes on to explore how these processes are disturbed in the various diseases of the bone marrow, blood, and lymphoid systems. Helps solve difficult diagnostic challenges and covers complex principles using highly illustrative, full-

color images. Explores all aspects of benign and malignant hematology, including blood transfusion and coagulation with extensive coverage of the pathogenesis of common clinical entities. Provides a quick and easy reference of key diagnostic issues in a comprehensive yet concise format. Includes and illustrates the WHO Classification of Hematologic Malignancies. Illustrates the new knowledge of the molecular basis of inherited and acquired blood diseases. **Color Atlas of Clinical Hematology: Molecular and Cellular Basis of Disease** is the must-have resource for both trainee and practising hematologists, and for every department of hematology. "Substantially updated and now multi-authored so that all aspects of haematology are equally covered, including the newest developments in molecular biology and genomic sequencing" "There is a surplus of invention in communicating complex problems here and an admirable effort to keep the reader totally up-to-date"
