Abstract: Communication, resources, dispositions and bureaucratic structure contribute to or limit implementation of public policy. Transmission of accurate communications is essential; lack of clarity and consistency cause problems in implementation. Staff, information, authority, and equipment resources are critical to policy implementation. Effects of the attitudes or dispositions of law makers are explored. Organizational structure may assist or hamper implementors; advantages and disadvantages of structural types are included. Types of policies that have experienced problems in implementation are described; prospects for improving implementation (e.g., follow-up, legislative power) are examined. Democracy for Sale is an on-the-ground account of Indonesian democracy, analyzing its election campaigns and behind-the-scenes machinations. Edward Aspinall and Ward Berenschot assess the informal networks and political strategies that shape access to power and privilege in the messy political environment of contemporary Indonesia. In post-Suharto Indonesian politics the exchange of patronage for political support is commonplace. Clientelism, argue the authors, saturates the political system, and in Democracy for Sale they reveal the everyday practices of vote buying, influence peddling, manipulating government programs, and skimming money from government projects. In doing so, Aspinall and Berenschot advance three major arguments. The first argument points toward the role of religion, kinship, and other identities in Indonesian clientelism. The second explains how and why Indonesia's distinctive system of free-wheeling clientelism came into being. And the third argument addresses variation in the patterns and intensity of clientelism. Through these arguments and with comparative leverage from political practices in India and Argentina, Democracy for Sale provides compelling evidence of the importance of informal networks and relationships rather than formal parties and institutions in contemporary Indonesia.

Humor permeates every aspect of society and has done so for thousands of years. People experience it daily through television, newspapers, literature, and contact with others. Rarely do social researchers analyze humor or try to determine what makes it such a dominating force in our lives. The types of jokes a person enjoys contribute significantly to the definition of that person as well as to the character of a given society. Arthur Asa Berger explores these and other related topics in *An Anatomy of Humor*. He shows how humor can range from the simple pun to complex plots in Elizabethan plays. Berger examines a number of topics ethnicity, race, gender, politics each with its own comic dimension. Laughter is beneficial to both our physical and mental health, according to Berger. He discerns a multiplicity of ironies that are intrinsic to the analysis of humor. He discovers as much complexity and ambiguity in a cartoon, such as Mickey Mouse, as he finds in an important piece of literature, such as *Huckleberry Finn*. *An Anatomy of Humor* is an intriguing and enjoyable read for

people interested in humor and the impact of popular and mass culture on society. It will also be of interest to professionals in communication and psychologists concerned with the creative process.

The magnitude of investment, the long time-frames involved and the influence of pre-existing infrastructure on urban infrastructure provision make a co-ordinated approach to forward-planning, policy development and implementation essential. There are major challenges in making decisions on urban infrastructure and getting management structures and processes in place. Getting it right generates long-term dividends; getting it wrong involves major costs, often borne by taxpayers. *Urban Infrastructure: finance and management* is posited on a strong belief that the physical structure of cities and the efficiency of infrastructure services delivered are driven by efficiencies within individual infrastructure sectors, lessons learnt across these sectors and the ability to co-ordinate and integrate sectors to

generate economies of scale. This necessitates an interdisciplinary approach, integrating knowledge from finance, governance, planning and management as well as the characteristics of the individual urban infrastructure sectors involved. Here it is not only about getting the initial decisions and policy settings right, but also ensuring effective implementation. A major theme running through the book is the nature of institutions and the governance structures responsible for delivery and management of urban infrastructure and the decision making processes involved. The editors have taken a deliberately pragmatic approach to the finance and management of urban infrastructure; chapters are cross-sectorial and present both theory and practice. This book is for students and practitioners in policy, planning, urban management, infrastructure finance and management.
