Technologies of Choice? SAGE

Enhanced transparency, accountability, and government or donor responsiveness to people needs are imperative to achieve better and more sustainable development results on the ground. The rapid spread of new technologies is transforming the daily lives of millions of poor people around the world and has the potential to be a real game changer for development. Improved accountability and responsiveness are critical for reaching the goals of eliminating extreme poverty and promoting shared prosperity with a focus on improving the well-being of the most vulnerable and marginalized groups in society. Within the broader political economy context, many questions remain unanswered about the role that new technologies can play to act as an accelerator for closing the accountability gap. Within this context, this report brings together new evidence from leading academics and practitioners on the effects of technology-enabled citizen engagement. The report aims to address the following four main questions: how do new

technologies empower communities through participation, transparency, and accountability?; are technologies an accelerator for closing the accountability gap - the space between supply (governments, service providers) and demand (citizens, communities, civil society organizations) that must be bridged for open and collaborative governance?; under what conditions does this occur?; and what are the experiences and lessons learned from existing grassroots innovators and donor-supported citizen engagement and crowdsourcing programs, and how can these programs be replicated or scaled up?. The report presents a theoretical framework about the linkages between new technologies, participation, empowerment, and the improvement of poor people's human well-being based on Amartya Sen's capability approach. The book provides rich case studies about the different factors that influence whether or not information and communication technology (ICT)-enabled citizen engagement programs can improve the delivery and quality of public services to poor communities. The report analyzes in depth both the factors and process of using new technologies to enhance the delivery of primary health services to pregnant women in Karnataka, India, and of several community mapping and crowdsourcing programs in Guinea, Haiti, Kenya, Libya, Sudan, and other countries.

It then examines the different machine learning techniques that are useful for data analytics, and how to visualize data with different graphs and charts. Presenting data analytics from a practice-oriented viewpoint, the book discusses useful tools and approaches for data analytics, supported by concrete code examples. The book is a valuable reference resource for graduate students and professionals in related fields, and is also of interest to general readers with an understanding of data analytics.

Making Schools Work Apress

A new framework for assessing the role of information and communication technologies in development that draws on Amartya Sen's capabilities approach. Information and communication technologies (ICTs)--especially the Internet and the mobile phone--have changed the lives of people all over the world. These changes affect not just the affluent populations of income-rich countries but also disadvantaged people in both global North and South, who may use free Internet access in telecenters and public libraries, chat in cybercafes with distant family members, and receive information by text message or email on their mobile phones. Drawing on Amartya Sen's capabilities approach to development--which shifts the focus from economic growth to a more holistic, freedom-based idea of human development--Dorothea Kleine in Technologies of Choice? examines the relationship between ICTs, choice, and development. Kleine proposes a conceptual framework, the Choice Framework, that can be used to analyze the role of technologies in development processes. She applies the Choice Framework to a case study of microentrepreneurs in a rural community in Chile. Kleine combines ethnographic research at the local level with interviews with national policy makers, to contrast the high ambitions of Chile's pioneering ICT policies with the country's

complex social and economic realities. She examines three key policies of Chile's groundbreaking Agenda Digital: public access, digital literacy, and an online procurement system. The policy lesson we can learn from Chile's experience, Kleine concludes, is the necessity of measuring ICT policies against a people-centered understanding of development that has individual and collective choice at its heart.

"Every Pixar movie is connected. I explain how and possibly why." These are the words that began the detailed essay now known as "The Pixar Theory," which came out way back in 2013. It collected over 10 million views on Jon's blog alone, and was syndicated on BuzzFeed, Mashable, Huffpost, Entertainment Weekly, and more - generating over 100 million impressions and now translated into a dozen languages. Now, these thoughts and ideas first written by Jon Negroni have been fully realized inside this book, aptly named The Pixar Theory. In this book, you'll find an analysis of every single Pixar movie to date and how it tells a hidden story lurking behind these classic movies. You'll learn about how the toys of Toy Story secretly owe their existence to the events of The Incredibles. You'll learn about what truly happened to the civilization of cars from Cars before the events of WALL-E. And of course, you'll find out the possible truth for why "Boo" of Monsters Inc. is the most important Pixar character yet. Welcome to the Pixar Theory. Don't forget to fasten your imagination.

Jerry Kaplan had a dream: he would redefine the known universe (and get very rich) by creating a new kind of computer. All he needed was sixty million dollars, a few hundred employees, a maniacal belief in his ability to win the Silicon Valley startup game. Kaplan, a well-known figure in the computer industry, founded GO Corporation in 1987, and for several years it was one of the hottest new ventures in the Valley. Startup tells the story of Kaplan's wild ride: how he assembled a brilliant but fractious team of engineers, software designers, and investors; pioneered the emerging market for hand-held computers operated with a pen instead of a keyboard; and careened from crisis to crisis without ever losing his passion for his revolutionary idea. Along the way, Kaplan vividly recreates his encounters

with eccentric employees, risk-addicted venture capitalists, and industry giants such as Bill Gates and John Sculley. And no one -- including Kaplan himself -- is spared his sharp wit.
