A blog style page v a more traditional "static" homepage. - Using widgets on your site to add neat features. - Types of sites you can build with WordPress (blog, business, typical site), with videos on setting these up. We'll also cover those vital plugins every site need, including: - Automatically take backups and get them sent to the cloud. - Automatically create important legal pages on your site, like terms and privacy policy. - Creating a contact page so visitors can contact you. - Add a related posts section to the end of every post to keep visitors on site longer. - Setup good SEO practices. - Setup social sharing buttons on your site, so visitors can easily tell their friends about your great web pages. Most people learn better when they can actually see what they are reading about, so one thing this book isn't, is shy with screenshots. This report describes a new system of credentialing that has arisen in the information technology and telecommunications industries over the past decade. It compares this system to traditional higher education, identifying both similarities and dissimilarities, and points to some cases in which the two interact.... The summary section of this report emphasizes the major themes of the certification system and its relationship to higher education: 1. The system is global and operates in many languages. 2. The student, not the institution, is at the center of the system. 3. The system has brought competency-based education and performance assessment to a status they have never enjoyed within traditional higher education. 4. Certification replace neither experience nor degrees, and the IT system does not pretend to be higher education. The summary also indicates the critical need for more information on certification candidates and providers of course work, since the new system is now large enough to play a role in state and national planning for postsecondary education.
