120 medical centers from around the world, this book comprehensively covers the entire field of emergency medicine -- from prehospital care, disaster preparedness, and basic resuscitative techniques -- to all the major diseases and disorders encountered in the emergency department. Unquestionably the leading text in the field, this is a true must-have reference for everyone in emergency medicine from residents to practicing physicians. The Seventh Edition is highlighted by a new full-color presentation, a companion DVD with 17 additional chapters, a greater international focus, and innovative new features and content.

This volume looks at the latest research techniques to study the interaction of visual spatial learning and attention guidance with behavioral, psychophysiological, and imaging methods. Part One (behavioral methods) focuses on different paradigms of visual search like visual foraging and contextual cueing, and also methods like feature distribution analysis and search in virtual reality. Part Two (psychophysiological methods) integrates innovative uses of classical potential changes like the CDA and N2pc, with multivariate analysis methods and multi-method designs. Part Three (functional imaging) covers lesion-behavior mapping, retinotopic and grid cell mapping methods for human fMRI, as well as functional registration by

hyperalignment and simultaneous eye-tracking and fMRI. In Neuromethods series style, chapters include the kind of detail and key advice from the specialists needed to get successful results in your laboratory. Cutting-edge and comprehensive, Spatial Learning and Attention Guidance is a valuable resource for all researchers and scientists who are interested in learning more about the relationship between attention and memory.

The Manchester Triage System (MTS) is the most widely used triage system in the UK, Europe and Australia, with tens of millions of patients being processed through hospital emergency departments. Emergency

Triage is the core text for the MTS which utilises a risk averse system of prioritisation for patients in all unscheduled care settings, and as such it is an essential text for all emergency department staff using the MTS, in particular triage nurses themselves. The second edition has been revised throughout and takes in the changes in practice introduced into MTS since the book was first published. These include: Redesigned and expanded flow charts Additional charts for allergy and palpitations New practices - such as the possibility of revascularisation for patients with stroke New discriminators, for example acute neurological deficit and significant respiratory history Redefinition of existing discriminators Also new to this

edition is the incorporation of sections on the use of the risk averse system in telephone triage, in settings where 'streaming' takes place and as an early warning score for patients in all unscheduled care settings. The tone of this edition reflects the more up to date, modified approach to triage while retaining the principles of clinical prioritisation, which in the authors' words "remains a central plank of clinical risk management in emergency care".

Emergency Triage is an essential handbook for all clinicians involved in unscheduled care settings such as emergency care, walk-in centres, minor injury units, primary care out of hours services.

Optimal Data Analysis: A Guidebook With Software for Windows offers the only statistical analysis paradigm that maximizes (weighted) predictive accuracy. This unique book fully explains this paradigm and includes simple-to-use software that empowers a universe of associated analyses. For any specific sample and exploratory or confirmatory hypothesis, optimal data analysis (ODA) identifies the statistical model that yields maximum predictive accuracy, assesses the exact Type I error rate, and evaluates potential cross-generalizability.

The German health care system is on a collision course with budget realities. Costs are high and rising, and quality problems are becoming ever more

apparent. Decades of reforms have produced little change to these troubling trends. Why has Germany failed to solve these cost and quality problems? The reason is that Germany has not set value for patients as the overarching goal, defined as the patient health outcomes achieved per euro expended. This book lays out an action agenda to move Germany to a high value system: care must be reorganized around patients and their medical conditions, providers must compete around the outcomes they achieve, health plans must take an active role in improving subscriber health, and payment must shift to models that reward excellent providers. Also, private insurance must be integrated in the risk-pooling system. These steps are practical and

achievable, as numerous examples in the book demonstrate. Moving to a value-based health care system is the only way for Germany to continue to ensure access to excellent health care for everyone.

In industry, owners, engineers and workers have struggled with lubricant degradation and its effects on their equipment. The purpose of *Lubrication Degradation Mechanisms: A Complete Guide* is to help personnel to understand the reasons behind the degradation of their lubricant, determine methods to identify the onset of degradation and reduce or eliminate lubricant degradation within their equipment. One of the most common forms of lubricant degradation is oxidation. However, this

is not the only method by which a lubricant degrades. By understanding the differences between degradation patterns, personnel can employ specific tasks / tests to aid in their identification of the type of degradation and the factors responsible. The aim of this book is to educate facility personnel on the methods of degradation and ways in which it can be reduced or eliminated while keeping an eye on the cost of operation.

Critical Care Neurology, Part I: Neurocritical Care focuses on the care specialists and general neurologists that consult in the ICU and their work with patients in acute, life-threatening situations who are dealing with

neurologic or neurosurgical crises emanating from either a preexisting neurologic syndrome or from a new neurologic complication appearing as a result of another medical or surgical critical illness. These two separate clinical situations form the pillars of neurocritical care, hence these practices are addressed via two separate, but closely related, HCN volumes. Chapters in both focus on pathophysiology and management, and are tailored for both general neurologists and active neurocritical specialists, with a specific focus on management over diagnostics. Part I addresses the principles of neurocritical care and the management of various neurologic diseases. Part II addresses the interplay between neurologic complications and the

surgical, medical, cardiac, and trauma of critical illnesses that most typically present in the ICU. Provides an essential neurocritical care overview for general neurologists Presents neurocritical care specialists with an update on severe neurological illness management Offers coverage of all the most frequent neurologic diseases requiring intensive care Includes chapters authored by global leaders in the field, providing the broadest, most expert coverage available on the topics discussed

Research in Nursing Series Formalised telephone triage is a fairly new concept in Accident and Emergency services although it has been an informal method of advising patients and health care

professionals for many years. In the A&E service of Manchester Royal Eye Hospital, formalisation of this method of patient prioritisation led to a need for an evaluation of this strategy. Both clinicians and patients need to know that the decision making which is undertaken in using telephone triage is undertaken by expert nurses and that the decisions made are accurate and safe. This study explores the various conditions that present to the A&E department and examines the accuracy of the diagnosis made by the triage nurse. It also examines the decision making process adopted by the nurse when giving advice in a telephone triage situation. The book is essential reading for both A&E and ophthalmic nurses, particularly those involved in setting up a telephone triage

service.

Das Manchester-Triage-System ist ein weltweit verbreitetes System, um Notfallpatienten in ihrer Behandlungsdringlichkeit einzuschätzen und einzustufen. Das Handbuch zur Telefon-Triage stellt die Methode der Ersteinschätzung am Telefon für die telefonische Triage und Beratung vor. Das System unterstützt erfahrene Nothelfer und Notfallpflegende. Es zeigt die Bedürfnisse des Patienten auf und hilft bei der Voreinstufung für die Organisation der Behandlungsprozesse sowie die telefonische Beratung. - Das Autorenteam des praktischen Handbuchs: - führt in das System der telefonischen Ersteinschätzung und Priorisierung von Behandlungsdringlichkeiten ein - definiert, strukturiert und visualisiert die

Ersteinschätzung anhand von 53 Notfallsituationen, die thematisch von Abszess über Bisse, Chemikalienkontakte sowie Diabetes und Durchfälle bis hin zu Zahnproblemen führen - vermittelt, wie Nothelfer und Notfallpflegende Menschen in Notfallsituationen am Telefon gekonnt, einschätzen, erkennen und priorisieren können, um bezüglich des Versorgungsortes effektiv und sicher entscheiden zu können - unterstützt die Anwendenden mit übersichtlichen Präsentationsdiagrammen, Farbleitsystemen und knappen tabellarischen Übersichten über die wichtigsten Notfallsituationen, Einschätzungsfragen und Beratungsanweisungen Die Inhalte der «Ersteinschätzung am Telefon» wurden

für den deutschsprachigen Markt von Experten fachlich überarbeitet und bezüglich rechtlicher und qualitätssichernder Aspekte angepasst.

In recent years, neurocritical care has grown and matured as a subspecialty of Critical Care Medicine with the advent of new monitoring, diagnostic, and therapeutic capabilities. The goal of neurocritical care is to rapidly deliver acute medical therapies and appropriate interventions through effective monitoring of both neurological and end organ function. Neurocritical Care provides 'at the bedside' guidance on the medical knowledge and technical skills required to care for critically ill

patients with neurologic conditions such as cerebrovascular disorders, neurotrauma, neuro-oncology, refractory seizures, neuromuscular diseases, infections, alterations in consciousness, and perioperative neurosurgical care. Part of the Pittsburgh Critical Care Medicine series, this compact volume is an ideal reference for physicians and trainees working in either a general ICU or specialty Neuro ICU unit. Readers will gain an understanding of background knowledge and concrete solutions to questions and situations encountered in daily practice.

Paediatric care has changed dramatically in the last few years and this has affected the care and management of ophthalmic patients. Babies and children with ophthalmic problems are often cared for by registered children's nurses in specialist children's hospitals.

However, some of these nurses may lack the required ophthalmic knowledge and expertise. Likewise, paediatric patients are also often cared for in ophthalmic environments, where the ophthalmic nurses don't necessarily possess the

same level of paediatric knowledge as their colleagues in children's hospitals.

This useful, comprehensive book bridges the gap, presenting the core information required by both groups: paediatric

nurses who care for ophthalmic patients, and ophthalmic nurses who look after children in their practice. Contents

include: • Working with the child and their family • Development of the eye and vision • Gross anatomy and physiology of the eye and adnexa •

Assessment of vision and eye movement

• Examination of the eye and adnexa •

Eye conditions, inherited and acquired •

Eye emergencies • Eye drops and

ointment • Statutory and voluntary

Pattern recognition basically deals with the recognition of patterns, shapes, objects, things in images. Document image analysis was one of the very first applications of pattern recognition and even of computing. But until the 1980s, research in this field was mainly dealing with text-based documents, including OCR (Optical Character Recognition) and page layout analysis. Only a few people were looking at more specific documents such as music sheet, bank cheques or forms. The community of graphics recognition became visible in the late 1980s. Their specific interest was to recognize high-level objects represented by line drawings and graphics. The specific pattern recognition problems they had to deal with was raster-to-graphics conversion (i.e., recognizing

graphical primitives in a cluttered pixel image), text-graphics separation, and symbol recognition. The specific problem of symbol recognition in graphical documents has received a lot of attention. The symbols to be recognized can be musical notation, electrical symbols, architectural objects, pictograms in maps, etc. At first glance, the symbol recognition problems seems to be very similar to that of character recognition; - ter all, characters are basically a subset of symbols. Therefore, the large know-how in OCR has been extensively used in graphical symbol recognition: starting with segmenting the document to extract the symbols, extracting features from the symbols, and then recognizing them through classification or matching, with respect

to a training/learning set.

This practical resource is designed to help professionals, parents and carers as they support children with vision impairments to develop independence in everyday tasks. Using the Early Years Foundation Stage framework as a basis, it provides a wealth of strategies and activities to develop key skills, including dressing, maintaining personal hygiene, eating and drinking and road safety. This is an invaluable tool that can be dipped in and out of to help make learning fun, boosting the child's confidence and helping create a positive 'can-do'

attitude when faced with new challenges. This book: ♦ Addresses the main problem areas for babies and young visually impaired children and their families, by providing simple explanations of skills and offering strategies and techniques to support progression onto the next stage. ♦ Is written in a fully accessible style, with photocopiable pages and additional downloadable resources. ♦ Provides a variety of documentation to chart the child's development and show progress over time. Research shows strong indicators that early intervention can reduce or eliminate developmental delays in children with a vision impairment. The supporting strategies in this book help busy professionals and carers to make every opportunity a

learning opportunity, allowing children with a vision impairment to become confident and independent individuals.

From its modest beginnings in the mid-19th century, Dar es Salaam has grown to become one of sub-Saharan

Africa's most important urban centres. A major political, economic and cultural hub, the city stood at the cutting edge of trends that transformed twentieth-century East Africa. Dar es Salaam has recently attracted the attention of a diverse, multi-disciplinary, range of scholars, making it currently one of the continent's most studied urban centres. This collection from eleven scholars from Africa, Europe, North America and Japan, draws on some of the best of this scholarship and offers a comprehensive, and accessible, survey of the city's development. The perspectives include history, musicology, ethnomusicology, culture including popular culture, land and urban economics. The opening chapter offers a comprehensive overview of the history of the city.

Subsequent chapters examine Dar es Salaam's twentieth century experience through the prism of social change and the administrative repercussions of rapid urbanization; and through popular culture and shifting social relations. The book will be of interest not only to the specialist in urban studies but also to the general reader with an interest in Dar es Salaam's environmental, social and cultural history. James Brennan is a Lecturer in History at the School of Oriental & African Studies (SOAS), University of London. His research interests include nationalism and urbanization in Tanzania, and he is currently researching the historical role of radio and other mass media in East Africa's political culture. Andrew Burton is an Honorary Research Fellow of the

British Institute in Eastern Africa, based in Addis Ababa. He has published widely on East African urban culture; and his current interests are the history of youth, urbanization and delinquency in Eastern Africa. Yusuf Lawi is the former Head of the Department of History at the University of Dar es Salaam; and is currently Senior Lecturer in History and Deputy Director of the University's Centre for Continuing Education. He specializes in environmental and social history.

This volume brings together essays which discuss and contextualise Gandhi's ideas on pluralism, religious identity, non-violence, satyagraha, and modernity. It interrogates the epistemic foundations of Gandhian thinking and

weltanschauung, identifies diverse strands within his arguments, and gives it new meaning in contemporary society. This book focuses on Gandhi's engagements with religious, political and social conflicts, his reflections on faith and modernity, and his argumentative dialogues with Mohammad Ali Jinnah and B R Ambedkar. It provides critical insights into Gandhi's philosophy and suggests ways of engaging with his ethical and moral ideas in contemporary intellectual and political discourse. Comparing and contrasting Gandhian thought and strategies with contemporary issues and conceptions of religious freedom, conflict resolution, and liberalism; the volume reformulates and reconstitutes his intellectual and political legacy. This book points to new

and possible future directions of research on Gandhian concepts and will

be useful for scholars in the fields of political science, Gandhian studies, sociology and philosophy.
